# 2.2 Programming PLU Data Table I

In the CL7200 series, PLU's are organized by Departments and sometimes Groups as shown in the figure below. It is important to understand this structure to take advantage of the CL7200 series sophisticated features regarding Label formats, X and Z reports, etc.

Note: Groups can cross-over the hierarchy of the department structure. You can organize PLU's by manufacturer, sales promotions, price range, etc.

Note: The CL7200 series has a sophisticated discount price programming function. The discount price function can be programmed in great detail. Programming may be done very easily using the PC software program CL-Works.

### 2.2.1 Department (Menu code 1210)

#### ( MENU $\rightarrow$ 2. PLU Data Table I $\rightarrow$ 1. Department )

The CL7200 series can be programmed to have up to 99 different departments with like PLU numbers in each department. The Scale ID setting (Menu 1830) determines which PLU's an operator will be able to access on that scale. The operator will only be able to call up PLU's assigned to the Department Number programmed in the Scale ID setting. The Department number can be changed to access the different departments programmed in the scale. Each Department also has a specific Speed Key Set assigned to it in Menu 1830.

### 2.12 Programming Global Setting

The Global Setting function is used to program functions of the CL7200 series like Label Format, Barcode Format, Discount and Tax settings that will be used on every PLU or transaction. These settings, when selected override any settings that are programmed in the PLU. This function can be very convenient and time saving when used properly.

### 2.12.1 Global Label Format (Menu code 1510)

( MENU  $\rightarrow$  5. Global Setting  $\rightarrow$  1. Label Format )

This Menu is used to select whether you use a Global Label Format for all PLU's or if the Label Format will be programmed in the PLU data structure.

Note: Label Formats 1~45 are Fixed Label Formats and can not be modified. Formats 51~99 are Free Formats that may be created using the CL-Works PC Program and downloaded to the CL7200 series.

- You can press the SAVE key at anytime to save the current data and if you want to exit without saving, press the ESC key.

# 2.15 Report

#### 2.15.1 Introduction

X mode is used to read (i.e. print and display) sales data. There are variety of reports that you can generate from X mode. Each of these reports is kept in two separate counters or "books" called X1 and X2. The X1 and X2 reports allow you to print reports at any time for either of the reporting periods. You can use X1 reports to see current daily totals and X2 reports to see

current weekly totals. The time period combination you chose is completely dependent upon how you use Z1 and Z2.

(MENU  $\rightarrow$  6. Report)

Remember that you can generate as many X reports as you would like because X mode does NOT clear any sales data.

# 3.2 Zero

You can use the ZERO key to correct for a deviation from zero as long as there are no PLUs or MISC PLUs called-up. The weight can sometimes drift from zero due to debris on the platter, leaving objects on the platter for excessive periods of time, or other environmental factors. To correct this, remove everything from the platter and press the ZERO key when the stable indicator " $\triangleright 0 \blacktriangleleft$ " is on. Below is a possible zero drifted state that should be corrected by simply pressing the ZERO key.

# 3.7 Discount

Before using discount function, you have to set discount data in menu 1130 of program mode. Discount is different depending on PLU type. (For details, see chapter 2.4.1)

### 3.7.1 Unit Price Discount - By Weight PLU

EXAMPLE:

- PLU# 28= KIWI (By-Weight PLU), Unit price=20.00
- 1st Target of Discount: "Discount amount from unit price"=0.50 for weight 0.500.
  2nd Target of Discount: "Discount amount from unit price"=1.00 for weight 1.000.

① Call up a PLU.

② Place an item on the platter. In this case, discount is not available because the weight of this item (0.490 kg) is lower than 1st target(0.500 kg).

# 3.9 Clerk Operation

There are three clerk modes as below.

#### Clerk Modes

No	Clerk Modes	Description
1	No Clerk	Sales clerk does not log in and makes sales using "PRINT" key.
2	Standard Clerk	Generating a standard clerk transaction is the same as any sales mode transaction except that you do NOT press the PRINT key; instead you must press one of the V(Clerk-Speed) keys (1 through 4) You can print total price label depending on the setting.
3	Floating Clerk	Generating a standard clerk transaction is the same as any sales mode transaction except that you do NOT press the PRINT key; instead you must press one of the V(Clerk-Speed) keys (1 through 4) You can print total price label depending on the setting. Sales data is added automatically.

#### To register clerk, refer to menu code 1850 of program mode. (See chapter 2.14.5)

#### Assumption

- Clerk should be registered on menu 1850. (See chapter 2.14.5)
- Clerk number should be set on menu 1856 to use "V1~ V64" keys (See chapter 2.14.5.6) If the clerk is not assigned to V1~V64, this clerk has to enter password after pressing V key.
- All clerks can use "V" key.
- \* Up to 100 transactions are available in Clerk mode
- \* Sales data is saved in memory.

\* If you press PRINT key to complete transaction, grand total price is printed and sales data is cleared from memory.

- \* If you want to see total price before completing transaction, press the ST/TTL key. To print, press the PRINT key.
- \* Even though you turn off the scale before printing, sales data is not cleared.
- If you want to print ticket when you log out, press V1~V64 to log on and press the PRINT key. You can also check total price by pressing ST/TTL key after log on.

Note: - You have to set Clerk log out time in menu 1874 of program mode.

(See chapter 2.14.7) If you do not call a PLU and do not operate the scale, time is computed. To set 30 seconds for logout time, enter 300. If you do not want to log out, enter 0.

- When there is no PLU, you can print ticket again by pressing X key (It depends on the setting of parameter 599, Print last ticket)

# 3.9.1 Standard Clerk Operation

#### Assumption

- You have to set "Select Clerk Sale mode" to "2" (Standard Clerk) in menu 1820 of program mode. (See chapter 2.14.3)

Note: - You can set print item in menu 1760 of program mode. (See chapter 2.13.6) - If there is credit sales, a receipt is printed additionally.

# 3.12 Return

The RETURN key is used to delete erroneous sale transactions. You can use the RETURN key to undo erroneous sales transactions like pressing the PRINT key inadvertently, selecting and printing the wrong PLU, an inadvertent Auto-Print in Pre-Pack mode, or perhaps adjusting the sales totals for a damaged or ruined package. Whatever the reason, the RETURN function will decrement returned PLU s transaction counter and sales totals by the specified amount.

You need to call-up the PLU that you wish to return by either pressing its corresponding speed key or typing its number.

- When the price is zero,
  - 0) By weight PLU : You need to enter the total price and weight that was printed on the return PLU s label
  - 1) By count PLU: You need to enter the total price and quantity that was printed on the return PLU s label
- When the price is higher than zero, Return function is performed by pressing RETURN key

Note: - If you set Shift key instead return key to "Y" in menu 1873 of program mode, you cannot use return function. (See chapter 2.14.21)
 If parameter 596 X/Z Report is not set, this function will not operated.

## 3.13 Prepack Key

Pre-Pack mode, it prints labels automatically. When it is in MANUAL mode, you must press the PRINT key (or ADD key) to get a label. In Pre-Pack mode, you can not select AUTO mode. Pre-Pack works like AUTO and SAVE mode except that the weight does not need to return to zero for every auto-print.

Pre-pack mode is very useful in backyard applications. This mode increases productivity by not requiring the user to press the PRINT key for every package. Instead the user can concentrate on weighing, wrapping, and labeling

- This function is only available for by-weight PLU.
- how to use prepack mode
- if you use Prepack mode without total function.
- same as current operating way
- (put the item on the platter and then print automatically)
- when you use the total function at Prepack Mode
- 1) when total function starts, press [ADD] key ( at Prepack Mode) 2) on the display. [Summation ON] will appear for about 3 seconds.
- 3) call up PLU and then place a item.
- each label will be automatically prints and will make a total.
- 5) repeat 3)~4).
- 6) when you press [ST/TTL] key, the total will be displayed.
- 7) to print the Sub Total, press [PRINT] key.
- 8) repeat 3)~7).
- 9) to print Grand Total Label, press [ST/TTL].
- (this case at there should be no sub-total remains, then press [ST/TTL] key) 10) Grand Total Label will be printed.
- 11) after complete the total function, press [ADD] key.
- 12) on the Display, [Summation OFF] will be appear for about 3 second.

- Printing item

- when you make a total with other items
- Printing item : (before) Total Price, Transaction No, Void Price, Void Count, (added) Total Weight, Total Quantity etc.
- when you make a total with only one item
- Printing item : (before) Total Price, Transaction No, Void Price, Void Count, (added) Total Weight, Total Quantity, Dept No, Dept Name
   PLU Name, Item Code, PLU No, Dept No, Cook By Date
   Sell By Date/Time, Packed On Date/Time, Produced Date etc

#### EXAMPLE:

Speed key #1= Onion Unit price=1.50, Sales Weight=1.0kg,

Press FUNCTION key and press PREPACK key and call up a PLU
* User may call up a PLU by pressing speed key or numeric key. Please refer to Menu code 1160.
② Place the item(s) on the platter.
Label is issued automatically.
Remove the item(s) from the platter.     Image: A state of the item (s) from the platter.     Image: A state of the platter.     I
<b>Note:</b> - If the scale is in Prepack mode then it will always auto-print if the Total price is greater than 0.00 and:
<ol> <li>The weight deviates by an amount greater than or equal to the Parameter 862 setting(Min. weight for sale) and the weight stabilizes at a weight greater than zero.</li> </ol>
<ol> <li>The weight deviates by an amount greater than or equal to the Parameter 861 setting(Auto threshold) and the weight stabilizes at a weight greater than zero.</li> </ol>
